

BRIDGE AND SUPPLY COMPANY

Jensen Silt Fence

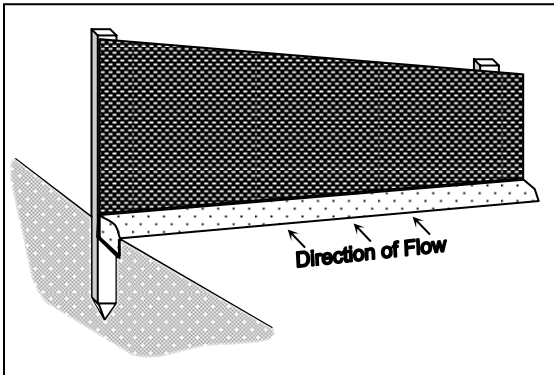

Sedimentation Control

Jensen Bridge & Supply Company manufactures pre-assembled silt fence used to control sediment run-off at construction sites. The fabric is specially designed to trap fine-grained sediment while allowing storm water run-off to pass through the fabric easily.

Product Details

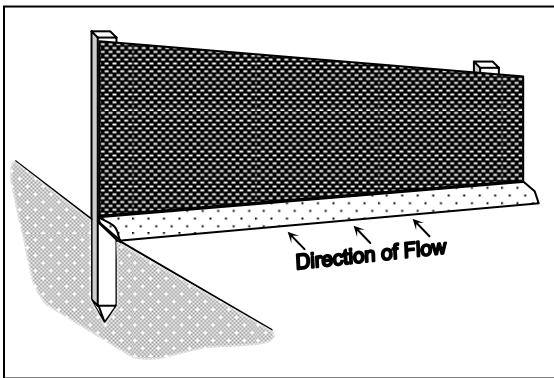

Jensen Silt Fence is a pre-assembled silt fence that Jensen Bridge & Supply Company manufactures in 3 different sizes. For projects requiring silt fence that is approved for use on Michigan Department of Transportation (MDOT) Projects, Jensen Bridge & Supply Company manufactures silt fence in rolls 3' high x 100' long with 1-1/2" x 1-1/2" hardwood stakes and lath backing spaced at the state specified 6' spacing. For other projects, we also manufacture silt fence that is made in rolls 3' high x 100' long with 1-1/2" x 1-1/2" hardwood stakes and lath backing or 2' high x 100' long with 3/4" x 1-1/2" hardwood stakes and lath backing both with stakes spaced at 8'4" apart.

Installation Suggestions

Suggested Method

The suggested method of installing silt fence is to dig a trench approximately 6" wide x 6" deep along the area where the silt fence is to be installed. Unroll the silt fence and drive each post into the ground with the post on the down-stream side of the fabric and the lath board on the up-stream side of the fabric. Drive post far enough to allow fabric to lay in the bottom of the 6" x 6" trench. Backfill the trench with soil and compact.

Alternate Method

An alternate method of installing silt fence is shown to the left. Unroll the silt fence and drive each post into the ground with the post on the down-stream side of the fabric and the lath board on the up-stream side of the fabric. Drive post far enough to allow the fabric to lay on the ground. Cover the flap with soil and compact.
